P

Introductory django

python machine answered a question at python basics

answer for while execution

After it is executed for $i=5$, it checks the condition. Since i became 6 and $i<6$ is not satisfied the code is will not be executed.

Loops

Python has two loop commands:

while loops
for loops

The while Loop
With the while loop we can execute a set of statements as long as a condition is true.

Example
Print i as long as i is less than 6:

```
i = 1
while i < 6:
    print(i)
    i += 1
```

Loops

Example

Print i as long as i is less than 6:

```
i = 1
while i < 6:
    print(i)
    i += 1
```

while execution

myNickname

Does the code inside the loop executes for i=6 ?

answer for while execution

pythonMachine

After it is executed for i=5, it checks the condition. Since i became 6 and i<6 is not satisfied the code is will not be executed.
